FIRE HOSES

The fire hose is usually the «weak link» in a firefighting installation. While the valve, the couplings and the nozzle are made of metal alloys, the hose is made of synthetic materials that are more vulnerable to chemical effects, sunlight, knocks and tears. Therefore, the only way for the user to be safe is to select a high-quality hose which will stand the test of time and ensure that the firefighting installation functions smoothly at a time of need. After exhaustive use at our testing facility, we have selected to supply Austrian fire hoses by HABERKORN, proven to be both durable and reliable. From standard hoses for fire cabinets, to PU/PVC coated hoses with high resistance to scratches and chemical attack, we stock large quantities of hoses that meet the needs of industry, shipping, Fire Brigade, Armed Forces and any professional for whom reliability is non-negotiable.

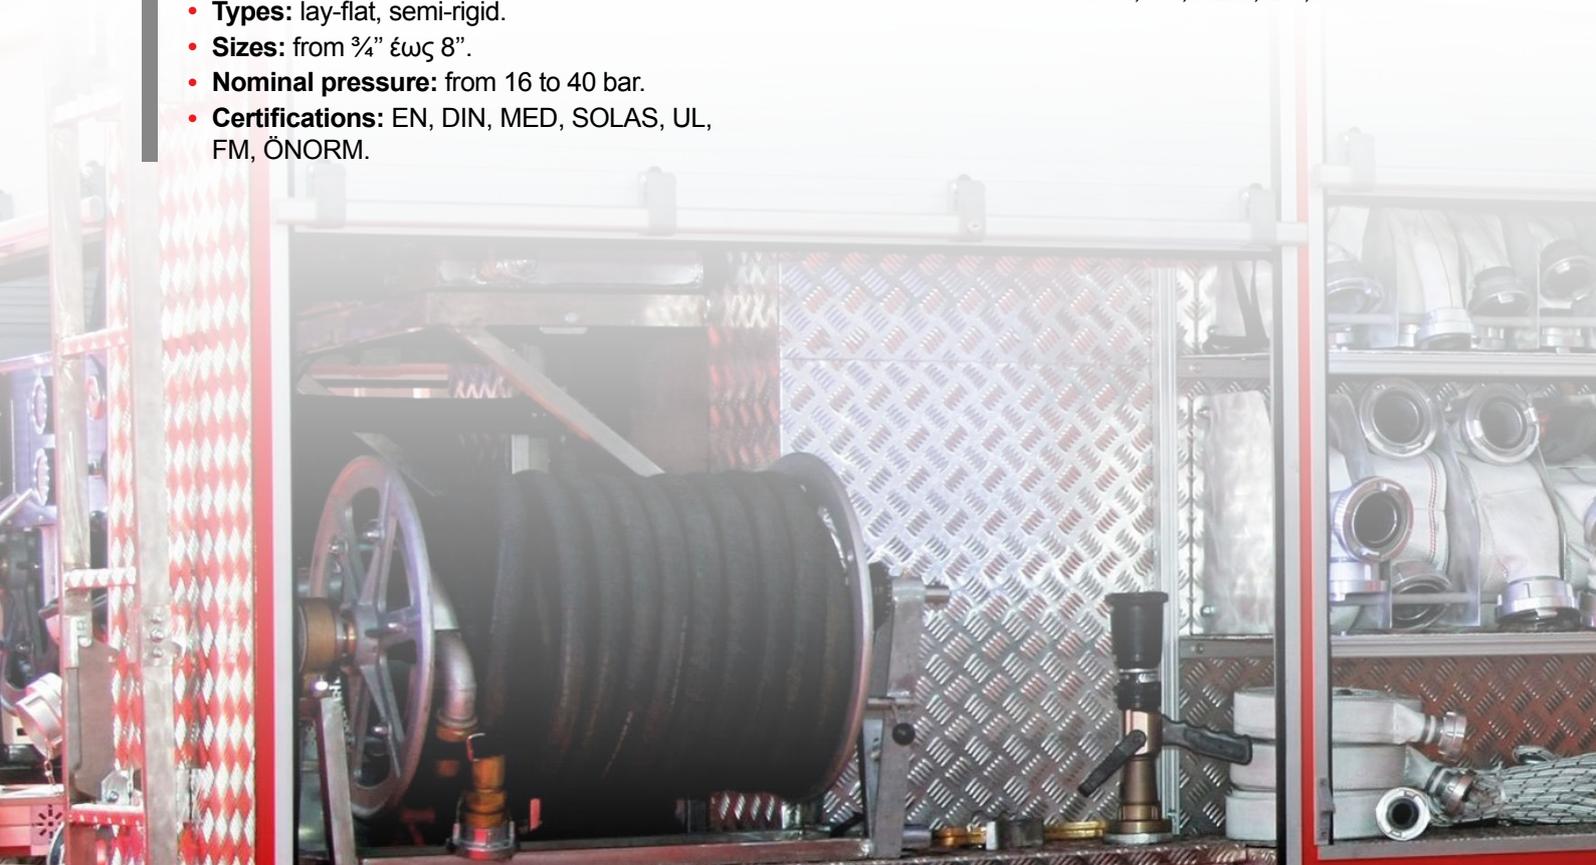

- **Types:** lay-flat, semi-rigid.
- **Sizes:** from ¾" έως 8".
- **Nominal pressure:** from 16 to 40 bar.
- **Certifications:** EN, DIN, MED, SOLAS, UL, FM, ÖNORM.

COUPLINGS

Fire hose couplings connect hoses to nozzles and valves in a quick and easy way. The couplings used in Greece are primarily Storz type, i.e. German type. We supply all types of couplings, namely German, French, Italian, Dutch, Spanish, Japanese, American, English, Russian and more. Couplings are manufactured either using the casting or forging method. Forged couplings do not have air bubbles inside them due to the external pressure applied to the molten metal during the manufacturing process, which makes them 3 to 4 times stronger than cast couplings. True to its promise to supply quality products, PRONOIA supplies exclusively forged couplings, made by European factories of worldwide acclaim.

- **Sizes:** από 1" έως 8".
- **Construction materials:** aluminium, brass, stainless steel.
- **Certifications:** DIN, NF, NEN, BS, ISO.

VALVES, DIVIDERS, SIAMESE

We supply ground-mounted hydrants, landing valves for fire hose cabinets, ball valves, butterfly valves, gate valves, deluge valves, dividers for firefighting vehicles, clapped siamese and standpipes for buildings, as well as non-return valves for every firefighting application. They are made by POK in France using strict manufacturing standards and are tested at the limits of their operating pressure in our testing facility.

- **Sizes:** from 1" to 8".
- **Construction materials:** aluminium, brass, stainless steel.
- **Certifications:** DIN, EN, NF, UL, FM.

FIRE HOSE REELS

The most decisive factor for a successful fire attack is a quick reaction time, so that the fire is not given time to grow to a full-scale blaze. Unlike fire hose cabinets where the entire lay-flat hose must be unrolled and then connected to the valve and the nozzle before attacking the fire, all we need to do when operating a fire hose reel is to pull as much length of semi-rigid hose we need and immediately attack the fire. Fire hose reels tend to replace fire hose cabinets in installations where it is crucial that immediate response is needed, such as IKEA stores, Leroy Merlin, Lidl and others. Fire hose reels are also mounted on fire trucks, usually at a pressure of 40 bar at the pump outlet. We are pleased to supply POK's fire hose reels, of high reliability and durability, certified to the corresponding French and European standards.

- **Types:** wall-mounted, floor-mounted, vehicle-mounted, earthquake-proof.
- **Extinguishing medium:** water, foam.
- **Sizes:** from 3/4" to 1 1/2".
- **Hose lengths:** from 20 to 80 m.
- **Certifications:** EN, NF.

Thinking ahead since 1936

Pronoia / 'prɔ.ni.a/ noun < pro + nous < foresight, anticipation, provision, prudence.

With more than 80 years' tradition in the quality fire protection sector, PRONOIA maintains the mentality of a youthful company at the cutting edge of technological evolution, whilst taking an agile approach to dealing with the challenges of the world market. PRONOIA is active in the following sectors: Maritime, Industrial, Oil & Gas, Food & Beverage, Mining, Transportation, Construction, Fire Brigade, Civil Protection and Armed Forces. With accumulated knowledge, experience and a friendly approach, we advise, research and implement fire protection projects in all sizes of business, from a small restaurant to the Public Power Corporation, Aluminium of Greece, Hellenic Petroleum and Motor Oil. At PRONOIA, we achieve this wide range of operational activity because we represent the top manufacturers in the world in firefighting and personal protection equipment.

PRONOIA. We think ahead, so that you are safe.
